SUMMARY

Mechanical Engineering Graduate from PIEAS with exposure to industrial operations (sugar production and power plant), experienced in design (SolidWorks, AutoCAD) and simulation tools (ANSYS, COMSOL). Seeking to apply technical knowledge in a dynamic industrial environment, with the goal of contributing to efficient engineering solutions and continuous professional growth.

EDUCATION

Bachelor of Mechanical Engineering (CGPA 3.30/4.00)

Pakistan Institute of Engineering and Applied Sciences (PIEAS)

Islamabad, Pakistan

Sep 2022–Jun 2026

F.Sc Pre-Engineering (1054/1100)

Fazaia Degree College, PAF Academy Asghar Khan

Risalpur, Pakistan

Aug 2019 – May 2021

Matric Computer Science (1036/1100)

Fazaia Degree College, PAF Academy Asghar Khan

Risalpur, Pakistan

Apr 2017 – May 2019

SKILLS

Engineering Tools: ANSYS, COMSOL, SolidWorks, AutoCAD

Core Knowledge: Thermodynamics, Heat Transfer, Power

Design & Analysis: CAD Modeling, FEA, Engineering Drawings

Data Tools: MS Excel, MS PowerPoint

Soft Skills: Problem Solving, Analytical Thinking, Communication, Teamwork

EXPERIENCE

Pakistan Tokamak and Plasma Research Institute (PTPRI)

Intern

Islamabad, Pakistan

Jun 2025 – Aug 2025

- Designed and simulated a plasma nitriding system using SolidWorks and COMSOL for SS316 surface treatment.
- Evaluated electric field distribution and ion behavior to understand plasma performance.
- Analyzed nitrogen diffusion under thermal conditions to support model validation.

Almoiz Industries Limited (Unit-1)

Intern

D.I. Khan, Pakistan

Aug 2025 – Sep 2025

- Observed overall power generation process, including boiler, steam turbine, and cooling tower operations.
- Developed understanding of steam cycle and energy conversion from boiler steam to turbine power generation.
- Gained exposure to power house, mill house, and process house with primary focus on power plant operations.

PROJECTS

Cryostat System Design for HTS Applications (FYP)

Sep 2025 – Jun 2026

- Designed a vacuum cryostat system for low-temperature applications under thermal stresses.
- Performed heat transfer analysis to reduce thermal losses.
- Validated design through calculations and simulation tools.

Green Refrigeration System – Thermodynamic Design

Feb 2024 – May 2024

- Designed an eco-friendly refrigeration system concept without conventional refrigerants.
- Applied thermodynamic principles to evaluate system performance.
- Compared system with vapor compression refrigeration systems.

Electric Vehicle Shuttle – LiFePO4 Battery Design

Feb 2025 – May 2025

- Designed a LiFePO4 battery pack based on energy and power requirements.
- Performed capacity sizing and basic thermal analysis.
- Ensured integration with vehicle electrical and mechanical systems.

CO-CURRICULAR ACTIVITIES/INTERESTS

- Cars Explorations Online
- Cricket, Football

CERTIFICATIONS

- ANSYS Structural Analysis
- SolidWorks CAD Design
- AutoCAD Professional
